Putting the State of Art to Practice: Pedestrian and Bicycle Evaluation Tools In the 2010 Highway Capacity Manual and AASHTO Highway Safety Manual

Abstract: *The recent publications of the 2010 Highway Capacity Manual (HCM) and AASHTO Highway Safety Manual (HSM) both significantly enhance the range of analysis tools available to transportation engineers and planners. The HCM's 2010 update expands the scope of the Manual to incorporate pedestrian, bicycle, and transit level of service (LOS) for urban streets for the first time, while the AASHTO HSM provides the first comprehensive national document for quantitative safety analysis, including predictive crash analysis and counter-measure selection. This presentation will provide an overview of the new methodologies and demonstrate applications of 2010 HCM and HSM techniques for non-motorized planning through real-world examples, showing both benefits and challenges to applying the methodologies.*

Key Topics: *Specifications review; analytical tools; level of service; safety analysis.*
